

I have read the petition for LPAM and I think it's a great idea, but as an engineering view I think that 1watt to 7watt with a loaded 3 meter antenna will be much better because will cause less interference.

If the FCC conciders this petition for LPAM, please consider 1 to 7watt with the 3 meter loaded antenna.

I think that 30 to 100watts will NOT be granted cause of skip issues.
